16. ABSTRACT

The U. S. Environmental Protection Agency initially established the indoor air Reference Bibliography in 1987 as an appendix to the Indoor Air Quality Implementation Plan. That document was submitted to Congress as required under Title IV--Radon Gas and Indoor Air Quality Research of the Superfund Amendments and Reauthorization Act of 1986.

The Reference Bibliography is an extensive bibliography of reference materials on indoor air pollution. It is intended to be used by researchers, policy makers, consumer information groups, and others who need to evaluate the scientific literature regarding specific indoor air pollutants or sources of indoor air pollutants. The Bibliography contains over 4500 citations and continues to increase as new articles appear. It is updated and published periodically to maintain its currency.

This document is organized into three sections: the Key Word Index, the Lead Author Index, and the Citations Listing. The catalog numbers listed in the first two sections identify the specific references contained in the Citations Listing.

DISCLAIMER

This document has been reviewed in accordance with U.S. Environmental Protection Agency policy and approved for publication. Mention of trade names or commercial products does not constitute endorsement or recommendation for use.

ACKNOWLEDGMENTS

Substantial contributions were provided by the following individuals:

Darcy Campbell, project officer for this document and formerly with the Environmental Criteria and Assessment Office. Present address: Radian Corporation, Research Triangle Park, NC 27709

Deborah Staves and Susan McDonald of Research Information Organizers, Research Triangle Park, NC 27709

PREFACE

In October 1986 Congress passed the Superfund Amendments and Reauthorization Act (SARA, PL 99-499) that includes Title IV - The Radon Gas and Indoor Air Quality Research Act. The Act directs that EPA undertake a comprehensive indoor air research program.

Research program requirements under Superfund Title IV are specific. They include identifying, characterizing, and monitoring (measuring) the sources and levels of indoor air pollution; developing instruments for indoor air quality data collection; and studying high-risk building types. The statute also requires research directed at identifying effects of indoor air pollution on human health. In the area of mitigation and control the following are required: development of mitigation measures to prevent or abate indoor air pollution; demonstration of methods to reduce or eliminate indoor air pollution; development of methods to assess the potential for soil gas contamination of new construction, and to examine design measures to avoid indoor air pollution. EPA's indoor air research program is designed to be responsive to the legislation.

In responding to the requirements of Title IV of the Superfund Amendments, EPA-ORD has organized the Indoor Air Research Program around the following categories of research: A) Sources of Indoor Air Pollution; B) Building Diagnosis and Measurement Methods; C) Health Effects; D) Exposure and Risk (Health Impact) Assessment; and E) Building Systems and Indoor Air Quality Control Options.

EPA is directed to undertake this comprehensive research and development effort not only through inhouse work but also in coordination with other Federal agencies, state and local governments, and private sector organizations having an interest in indoor air pollution. The ultimate goal of SARA Title IV is the dissemination of information to the public. This activity includes the publication of scientific and technical reports in the areas described above. To support these research activities and other interests as well, EPA publishes this document, INDOOR AIR: Reference Bibliography.

I. INTRODUCTION

The U. S. Environmental Protection Agency initially established the indoor air Reference Bibliography in 1987 as an appendix to the Indoor Air Quality Implementation Plan. That document was submitted to Congress as required under Title IV--Radon Gas and Indoor Air Quality Research of the Superfund Amendments and Reauthorization Act of 1986.

The Reference Bibliography is an extensive bibliography of reference materials on indoor air pollution. It is intended to be used by researchers, policy makers, consumer information groups, and others who need to evaluate the scientific literature regarding specific indoor air pollutants or sources of indoor air pollutants. The Bibliography contains over 4500 citations and continues to increase as new articles appear. It is updated and published periodically to maintain its currency.

This document is organized into three sections: the Key Word Index, the Lead Author Index, and the Citations Listing. The catalog numbers listed in the first two sections identify the specific references contained in the Citations Listing.

Key Word Index

The Reference Bibliography is indexed by key words to facilitate searching. For example, one may search for a specific pollutant, pollutant source category, measurement method, or mitigation technique. A listing of these terms, divided into two groups, is given at the end of this section. The first group of indexing terms is composed of individual indoor air pollutants. For example, to find all of the citations concerning biological contaminants, locate the key word "biological." Under that term are listed the catalogue numbers for all citations dealing with that subject matter.

The second list of indexing terms includes categories of pollutant sources, such as "activities" (household products, hobbies, etc.); "ambient" (air, soil, water); "combustion;" "garages;" and "materials." The "building" category contains citations that discuss indoor air pollutants in public buildings, places of work, and other nonresidential buildings, as well as citations on the Sick-Building Syndrome. The "comfort" category contains citations that discuss the effects of noise, temperature, and subjective perceptions. References on indoor air pollutant concentrations are found under the "concentrations" category, which also provides information on exposure from indoor sources and pollutant levels detected. For indoor/outdoor concentration comparisons, use both "ambient" and "concentrations."

The "health effects" category is divided into smaller groups: "allergens," "carcinogens," "irritation" (sensory), "mutagens," and "respiratory." For other effects, such as cardiovascular effects, use only "health effects." The "humidity and humidifiers" group contains citations concerning both the effects of humidity on indoor air pollutant levels and the contribution of indoor air pollutants from the use of humidifiers. Citations contained under "mitigation" refer to articles that discuss the treatment, abatement, and control of indoor air pollutants. For specific information on the use of ventilation in mitigation, see also "ventilation." This group contains references on air exchange rates, energy efficiency, circulation, and draft effects on indoor pollutant levels. "Modeling" lists citations on the use of models to simulate actual indoor conditions. "Measurement" contains information on the monitoring methods used to evaluate indoor air pollutant levels.

The "overview" category contains citations of all articles that review indoor air quality in general terms, and the "policies and regulations" index term contains citations that review existing standards and legislation. Searching on "sensitive populations" provides information specific to the effects of indoor air pollutants on fetuses, infants, children, the elderly, the infirm, and people suffering from existing respiratory or cardiac problems. "Transportation" contains citations dealing with pollutant levels found inside automobiles, trains, airplane cabins, and the like. To find information on the pollutants created by transportation vehicles that affect indoor air quality, refer to the "ambient" category. Finally, information concerning the effects of indoor air pollutants on materials can be found in the "welfare" category.

Lead Author Index

Following the Key Word Index is the Lead Author Index. For a list of articles published by a specific researcher, simply locate the author's name and refer to the citation(s) as listed by catalog number.

Citations Listing

The Citations Listing provides all of the bibliographic information available on the publications listed in the Key Word Index and the Lead Author Index.

We welcome comments on the Reference Bibliography, its use, and how it may be improved. We also encourage recommendations for citations not included in the Bibliography.

Indexing Terms Used in the Indoor Air Pollution Reference Bibliography

Pollutants

- Asbestos
- Biological (biological contaminants)
- Carbon dioxide
- ETS (environmental tobacco smoke)
- Formaldehyde
- Metals
- Nitrogen oxides
- Non-ionizing radiation
- Ozone
- PAHs (polycyclic aromatic hydrocarbons)
- Particulate matter
- Pesticides
- Radon
- Sulfur dioxide
- Volatile organic compounds (gas-phase organic compounds)

Other indexing terms

Includes sources, concentrations measured, measurement methods, mitigation techniques, health effects, and policies and regulations.

- Activities
- Ambient
- Buildings
- Combustion
- Comfort
- Concentrations
- Garages
- Health effects
- Health effects-allergens
- Health effects-carcinogens
- Health effects-irritation
- Health effects-mutagens
- Health effects-respiratory
- Humidity and humidifiers
- Materials
- Measurement
- Mitigation
- Modeling
- Odor
- Overview
- Policies and regulations
- Sensitive populations
- Sources
- Transportation
- Ventilation
- Welfare
